

# MSU AGRICULTURE INNOVATION DAY

## FOCUS ON PRECISION

# TECHNOLOGY THAT PAYS

*Increased Resolution Results in Increased ROI*

Capability	Value
Automated Section Control	Potential of 15 – 20% input savings over manual section control
Individual Nozzle Control (INC)	Potential of 2 – 5% additional savings over Automated Section Control
INC + PWM Control	Curve Compensation capabilities reduce over & under application on curves
Auto Nozzle Switching Capabilities	Increased rate and speed range
Increased PWM Hertz	Improved rate range without skip risk

# MSU AGRICULTURE INNOVATION DAY

## FOCUS ON PRECISION

# TECHNOLOGY THAT PAYS

- Section Control is the first level of automation technology that delivers immediate RIO
- PWM Nozzle Control enables more precise rate control at a nozzle by nozzle resolution
- PWM Nozzle Control enables a sprayer boom to perform curve compensation, reducing over application on the inside of the curve (phytotoxicity) and under application on the outside of the boom (escapes)
- Curve Compensation on planter works the same way to provide a consistent rate through curves
- Improved PWM frequency reduces risk of skips

*Expanding Your Toolbox Provides New Intelligence*

Image of field

Detection

Selective spray

See & Spray Application in Cotton

- Up to 90% Herbicide Savings
- Improved Weed Control
- Environmental Responsibility
- Future Capabilities

## FOCUS ON PRECISION

# TECHNOLOGY THAT PAYS

*In-Field Sensors Provide Real-Time Data and Actionable Insights*

Sensors	Decision Opportunities
Temperature & Relative Humidity (RH)	Evapotranspiration, Chill hours, Degree days, Frost alert
Wind speed & direction	Evapotranspiration, Spray, Disease modeling
Rain gauge	Field condition, Irrigation scheduling
Leaf wetness	Disease modeling, Spray timing
Solar radiation	Evapotranspiration
Moisture Probe	Field condition, Irrigation scheduling, Stress Management

Wabash IN 2017 | Soybean Plot | PCPB02B301758

07-07-2017 (7:39 PM) to 08-07-2017 (7:39 PM) - America/Chicago

Soil Type: Clay Loam, Sensors: 10, 20, 30, 50, 100 cm, Use Interpolation: Yes, Show Zeros: No

- Few decisions can be made in-season that will drive actions to directly impact ROI
- Leveraging in-field sensors may provide the highest resolution, real-time data
- Decisions should be based on *Intelligence*
- *Intelligence* must be derived from proper analysis of multiple, accurate pieces of information

*Precise Application Data Enables Optimal Nutritional Placement*

Feature	Detail
Nutrients Detected	Nitrogen, Ammonium-N, Phosphate, Potassium, Dry Matter
Detection Frequency	>4000 times per second
Target	Product can be applied based on a target rate for one nutrient and a limit rate for a second nutrient
Control	Tractor Speed Control + Flow Control (on compatible models)
Documentation	2630 Display, 4600 Display, 4640 Display, John Deere Operations Center

College of Agriculture  
and Natural Resources  
MICHIGAN STATE UNIVERSITY

# MSU AGRICULTURE INNOVATION DAY

## FOCUS ON PRECISION

# TECHNOLOGY THAT PAYS

- Deliver targeted rate of a specific nutrient without exceeding a secondary
- Determine site specific mineral requirements remaining for the optimal nutritional profile
- Manage variability between loads and provide detailed data for records without requiring samples
- Provides documentation of manure quality as opposed to quantity
